Deltek unveils Dela: An AI-Powered Companion for Project Success

May 1, 2024

Deltek, a leading provider of software and solutions for project-based businesses, announces the launch of Dela, a suite of AI-powered technologies designed to revolutionize project delivery.

Developed with a focus on "purposeful innovation," Dela integrates traditional AI (algorithms and machine learning) and generative AI (GenAI) capabilities across Deltek's product portfolio. This combined approach, along with Natural Language Processing (NLP) and advanced search functionalities, empowers users to work smarter and gain deeper insights into their projects, industry trends, and Deltek solutions.

Tailored Functionality for Project Teams

Dela offers a variety of features specifically designed to address the unique needs of project-based businesses. These include:

- **Smart content generation** to streamline tasks and improve efficiency.
- **Predictive project success analysis** to identify potential risks and opportunities.
- **Intelligent information exploration** through intuitive voice or text commands.

A Unified AI Platform

Previously available as separate functionalities within Deltek solutions, Dela now brings these AI capabilities together under one umbrella. This centralized platform ensures a consistent user experience and facilitates the seamless integration of future AI advancements.

Warren Linscott, Chief Product Officer, said: "Dela is more than a digital assistant – rather an intelligent business companion that works behind the scenes within our project-based solutions, empowering Deltek Project Nation to work smarter and more efficiently across the project lifecycle."

Real-World Applications of Dela

Several examples showcase how Dela is already enhancing Deltek's solutions:

- **Costpoint and Vantagepoint users** can leverage voice or text commands to interact with their ERP systems, retrieving information, performing tasks, and accessing help without navigating complex menus.
- **GovWin IQ's Smart Summaries™** powered by GenAI streamline data collection and generate concise summaries of federal agency profiles and contract awards.
- **Deltek Talent Management** will soon utilize Dela to automate parts of the recruitment process, including generating job descriptions and streamlining workflows.

Continuous Development and Integration

Deltek emphasizes its ongoing efforts to integrate Dela's capabilities across its entire product suite. From project management software like PM Compass to enterprise resource planning solutions like Maconomy and Replicon, Dela promises to enhance user efficiency and satisfaction.

Recognizing the importance of data security in project-based businesses, Deltek underscores its commitment to responsible AI practices. The company collaborates with partners who respect user privacy and ensures customers have the option to opt-in to AI features that utilize their data.

Deltek positions Dela as a cornerstone of its "purposeful innovation" strategy, emphasizing its commitment to continuous development and alignment with the evolving needs of project-based businesses. The press release concludes by assuring customers of Deltek's dedication to prioritizing their success through the safe and secure application of AI technology.
