PakEnergy showcases Renewables Management Software at RE+ Texas

Recognizing the growing needs of renewable energy professionals, PakEnergy, a provider of software solutions for the oil and gas industry, is showcasing its PakEnergy Renewables software at the RE+ Texas conference (May 14-15, Booth 523).

PakEnergy Renewables is a purpose-built system designed to tackle the complex land management, project management, and asset management challenges faced by renewable energy developers. This software caters specifically to solar, wind, geothermal, and carbon capture projects, allowing developers to seamlessly manage growing portfolios and streamline operations.

Throughout the conference, the PakEnergy team will be offering live demonstrations of the PakEnergy Renewables software at Booth 523. Attendees will have the opportunity to see firsthand how the software can benefit their renewable energy projects.

Wes Adams, Head of Land at Zanskar Geothermal & Minerals, Inc, said: "We are an extremely lean team managing a growing portfolio of land leases and geothermal assets in multiple states. We needed a dynamic solution to help us effectively organize our leases, track a variety of mineral and subsurface assets, and map projects and relationships with logic, speed, and accuracy. PakEnergy Renewables is robust but not overly complicated. It's an intuitive system that will help accelerate our prospecting efforts and allow us to be more strategic in negotiating and structuring lease options."

PakEnergy Renewables was developed with the direct input of leading international and domestic clean

energy organizations. This collaborative approach ensures the software delivers the features and functionality most critical to renewable energy professionals.

“Given our long-standing expertise in land and minerals management, PakEnergy is uniquely positioned to provide software solutions to companies developing and managing renewable energy projects,” says Chief Executive Officer Santosh Nanda. “PakEnergy Renewables is a game-changing system that helps clean energy professionals boost ROI and generate strong, predictable results with relevant automation features and real-time visibility on their operations.”

Key Features of PakEnergy Renewables

- **Seamless Land and Project Management Automation:** Increased speed and accuracy in land and project management processes.
- **Robust GIS Tools:** Enables efficient project creation and mapping within minutes.
- **Automated CRM and e-Calendar:** Proactive management of contracts, obligations, and agreements.
- **Data Analytics and Real-Time Visibility:** Drives informed decision-making with comprehensive data analysis and 24/7 operational visibility.
- **Straightforward Interface:** Easy-to-learn platform ensures projects stay on track, mitigating costly risks.
