

KBR Awarded Contract to Support Iraq's Sustainable Development Goals

June 18, 2024

Global engineering and construction leader KBR (NYSE: KBR) has secured a five-year contract with options to support the Iraqi government's ambitious plans for infrastructure development and a more sustainable future.

The \$46 million contract will see KBR provide advisory and consultancy services to the Iraqi Ministry of Planning, focusing on creating an effective framework for delivering large-scale infrastructure projects. KBR's expertise will encompass areas like economic planning, strategy development, feasibility studies, technical reviews, and project management.

This comprehensive contract builds on KBR's existing work in Iraq's energy sector. The company has partnered with various ministries to identify, design, and implement critical projects to strengthen the country's economy and social well-being. Notably, KBR's focus on innovation and sustainability will be central to achieving these ambitious goals, aligning with Iraq's long-term vision for environmentally responsible growth.

Jay Ibrahim, President of KBR Sustainable Technology Solutions, said, "This is a great example of KBR utilizing its growing global capabilities to support regeneration and sustainable growth of a nation. We are proud to further our partnerships in country, where we are already helping make our customers' ambitious plans a reality. With our deep expertise in engineering and energy solutions, KBR is well positioned to help our valued customers meet their energy security and sustainability objectives."

KBR's deep expertise in engineering and energy solutions will be instrumental in assisting the Iraqi government in achieving energy security and sustainability objectives. While supporting deliveries from its

global locations, KBR will also be expanding its presence in Iraq through a new operational office in Baghdad. Additionally, they plan to establish an engineering design center to enhance the skills of Iraqi engineers.
