

Lindus Health Launches Comprehensive Dermatology CRO Solution

August 8, 2024

Lindus Health, a leading clinical research organization (CRO) specializing in rapid and reliable clinical trials, has launched its new “All-in-One Dermatology CRO” offering. This comprehensive solution caters to the unique challenges of dermatology clinical trial projects, from prescription medications to over-the-counter products.

Lindus Health’s expertise spans a wide range of dermatological conditions, including acne, eczema, atopic dermatitis, and skin cancers. The company’s “All-in-One Dermatology CRO” provides a full suite of services, including protocol development, regulatory affairs, patient recruitment, data collection, and more.

Leveraging its proprietary technology platform, Citrus™, and a deep understanding of dermatology, Lindus Health offers a streamlined approach to clinical trials. The company’s innovative recruitment strategies, including a vast electronic health records (EHR) database, enable faster patient enrollment compared to traditional CROs.

“Dermatology clinical trials are incredibly unique, whether they are seen as cosmetic or therapeutic in the eyes of regulatory authorities,” said Meri Beckwith, co-founder at Lindus Health. “Our ‘All-in-One Dermatology CRO’ helps sponsors navigate these nuances to run their trials with more ease.”

Key features of the “All-in-One Dermatology CRO” include:

- End-to-end CRO services

- Innovative patient recruitment strategies
- Customizable eClinical software (Citrus™)
- Deep industry and regulatory expertise
- Dedicated site services

Lindus Health's commitment to delivering exceptional clinical trials is evident in its partnership with Thirty Madison, a specialty telemedicine company. A recent dermatology study conducted by Lindus Health achieved impressive patient completion rates, demonstrating the company's ability to drive successful outcomes.

"The Lindus team sets the bar for how dermatology studies should be run," said Neil Parikh M.D., Chief Medical Officer at Thirty Madison, the specialty telemedicine company and recent collaborator of a dermatology study run by Lindus. "Their tight study management led to impressively high completion rates among patients who enrolled, which is especially crucial for assessing how dermatological conditions present over time."

By streamlining the clinical research process and leveraging cutting-edge technology, Lindus Health empowers dermatology sponsors to bring innovative therapies to market more efficiently.
