

Amazon Web Services Announces Significant Investment in UK Digital Infrastructure

September 27, 2024

Amazon Web Services (AWS) has announced plans to invest £8 billion in the UK over the next five years. This investment will be used to build, operate, and maintain data centers across the country, supporting growth and productivity in various sectors.

AWS's investment is estimated to contribute £14 billion to the UK's GDP and support an average of 14,000 full-time equivalent jobs annually in local businesses. This investment builds upon AWS's existing presence in the UK, with over £3 billion invested since 2020.

Organizations of all sizes and industries are leveraging AWS to reduce costs, become more agile, and innovate faster. Customers such as AstraZeneca, Cancer Research UK, Deliveroo, easyJet, EDF, and many others are using AWS to enhance their operations and compete in the global market.

The UK government has welcomed this investment, recognizing its potential to boost economic growth and create jobs. Chancellor of the Exchequer, Rachel Reeves, and Technology Secretary, Peter Kyle, have expressed their support for AWS's commitment to the UK's digital economy.

Tanuja Randery, Vice President and Managing Director of AWS EMEA, emphasized the importance of cloud computing and AI in driving innovation and productivity. She highlighted the potential benefits for UK businesses of all sizes and sectors.

AWS's investment in the UK aligns with the government's efforts to promote digital adoption and leverage technology to improve economic growth and competitiveness. By investing in digital infrastructure, AWS is empowering businesses to innovate, scale, and compete on a global level.
