

# Black & Veatch to Provide Engineering Services for Golar MK II FLNG Project

October 16, 2024

**Black & Veatch, a global leader in floating liquefied natural gas (FLNG) infrastructure solutions, has been awarded a significant contract to provide engineering services for the Golar MK II FLNG project.**

Black & Veatch will contribute its licensed PRICO® technology, perform detailed engineering design, specify and procure topside equipment, and provide commissioning support for the FLNG topsides and liquefaction process. The project builds upon Black & Veatch's successful track record in supporting Golar's previous FLNG vessels, the Hilli and Gimi.

The MK II FLNG vessel will have a production capacity of approximately 3.5 million tons per annum (MTPA) and is expected to be delivered in the fourth quarter of 2027. The project will help to increase global LNG supply, enhance energy security, and support the transition to cleaner energy sources.

Black & Veatch's involvement in the Golar MK II project further solidifies its position as a leading provider of FLNG infrastructure solutions. The company's expertise in engineering, design, and project management will be instrumental in ensuring the successful delivery of this complex project.
