

United Airlines Partners with SpaceX to Bring revolutionary Starlink Wi-Fi to Entire Fleet

October 9, 2024

United Airlines has announced a groundbreaking partnership with SpaceX to bring Starlink's high-speed internet to its entire fleet. This transformative move will provide passengers with the same seamless connectivity they enjoy on the ground, from gate to gate.

United Airlines, a pioneer in aviation innovation, has consistently sought to elevate the travel experience for its customers. This partnership with SpaceX is a testament to that commitment. By offering Starlink Wi-Fi, United is setting a new standard for in-flight connectivity, ensuring passengers can stay connected and productive throughout their journey.

Starlink, SpaceX's advanced satellite network, delivers high-speed internet access anywhere in the world, including remote locations unreachable by traditional means. This partnership will enable United to provide passengers with a reliable and consistent internet connection, regardless of their flight destination.

With Starlink, passengers can enjoy a wide range of activities, including live streaming, productivity tools, gaming, and e-commerce. Whether you need to work remotely, stay entertained, or stay connected with loved ones, Starlink will provide the connectivity you need.

United expects to have Starlink installed on its entire fleet within the next few years. This ambitious rollout will ensure that all United passengers can benefit from this cutting-edge technology.

"Everything you can do on the ground, you'll soon be able to do onboard a United plane at 35,000 feet, just about anywhere in the world," said United CEO Scott Kirby. "This connectivity opens the door for an even better inflight entertainment experience, in every seatback – more content, that's more personalized. United's culture of innovation is, once again, delivering big for our customers."

"We're excited to team up with United Airlines to transform the inflight experience," said Gwynne Shotwell, President and Chief Operating Officer at SpaceX. "With Starlink onboard your United flight, you'll have access to the world's most advanced high-speed internet from gate to gate, and all the miles in between."

United's commitment to innovation extends beyond this partnership. The airline has a long history of introducing industry-leading initiatives to enhance the travel experience for its customers. By offering Starlink Wi-Fi, United is further solidifying its position as a leader in aviation innovation.
