

Intelsat Recognized for Pioneering Satellite Broadband Project in Burkina Faso

November 1, 2024

Intelsat, a leading global provider of satellite communications solutions, has been honored with the prestigious Africa Sustainable Futures award in the “Digital Infrastructure” category, presented by the Financial Times and the World Bank Group’s Multilateral Investment Guarantee Agency (MIGA).

This recognition highlights Intelsat’s groundbreaking satellite broadband project in Burkina Faso, which has significantly enhanced the country’s telecommunications resilience. By deploying a robust satellite network, Intelsat has addressed the challenges posed by the country’s fragile terrestrial infrastructure, ensuring continuous connectivity even in remote and underserved areas.

Intelsat’s innovative solution has provided a reliable and scalable communication network, empowering businesses, governments, and individuals in Burkina Faso. The project has contributed to economic growth, improved access to education and healthcare, and strengthened the country’s digital infrastructure.

“We are honored to receive this award,” said Rhys Morgan, regional vice president, EMEA, [Media](#) and [Networks](#) at Intelsat. “This recognition underscores our commitment to providing innovative and reliable connectivity solutions that make a real difference in people’s lives. We look forward to continuing our work in Burkina Faso and other regions in need of resilient digital infrastructure.”
