

OQ Technology Secures EU Funding for 6G Innovation

November 28, 2024

OQ Technology, a leading provider of satellite-based IoT connectivity, has been selected by the European Union’s Horizon Europe program to receive funding for its groundbreaking AMAZING-6G project. This project aims to push the boundaries of wireless technology and develop innovative solutions for a wide range of industries.

The EU’s Horizon Europe program is dedicated to supporting cutting-edge research and innovation across various fields, including telecommunications. By selecting OQ Technology’s project, the EU recognizes the company’s potential to contribute to the development of next-generation networks that will transform society and drive economic growth.

OQ Technology’s AMAZING-6G project will focus on developing and testing innovative 6G use cases across critical sectors such as healthcare, public safety, energy, and transportation. By leveraging satellite-based IoT technology, OQ Technology aims to address the limitations of traditional terrestrial networks and provide reliable, high-performance connectivity in remote and underserved areas.

Through large-scale trials, OQ Technology will demonstrate the transformative potential of 6G technology and pave the way for the development of new applications and services. This funding will enable the company to accelerate its research and development efforts, further solidifying its position as a leader in the global 6G ecosystem.
