

# Sungrow Powers Africa's Green Energy Future with 308MW Solar Project

November 19, 2024

**Sungrow, a global leader in renewable energy solutions, has achieved a significant milestone with the completion of a 308-megawatt peak solar installation in Africa. This project underscores the growing potential of solar energy in Africa and its contribution to a sustainable future.**

The project, one of the largest solar installations in the region, is capable of powering over 110,000 homes and generating approximately 500 million kilowatt-hours of clean energy annually. This achievement showcases the scalability and reliability of solar power, particularly in regions with abundant sunlight.

"We are proud to have contributed to this landmark project," said Thompson Meng, Vice President of Sungrow PV & Storage BG. "This installation demonstrates the significant role solar energy can play in addressing Africa's growing energy needs and reducing carbon emissions."

The project's success can be attributed to several factors, including Sungrow's advanced solar inverter technology, strong partnerships with local stakeholders, and supportive government policies. By leveraging its expertise and innovative solutions, Sungrow has positioned itself as a key player in the global energy transition.

As the global demand for clean energy continues to rise, Sungrow remains committed to providing cutting-edge renewable energy solutions. The company's focus on research and development, coupled with its strong track record of delivering high-quality products and services, ensures its continued success in the global market.

This project serves as a model for sustainable development in Africa, demonstrating the potential of solar energy to drive economic growth and environmental protection.
