

Madkour Group to Invest \$200 Million in Mauritania's Natural Gas Power Plant

December 21, 2024

Madkour Group, a leading Egyptian engineering and infrastructure powerhouse, is poised to transform Mauritania's energy landscape with a significant investment in a state-of-the-art natural gas power plant. Valued at over \$200 million, this ambitious project will play a crucial role in addressing Mauritania's energy challenges and driving economic growth.

The plant, with a projected capacity of 160-180 MW, will leverage the country's natural gas reserves to provide a reliable and sustainable source of energy for industries, households, and businesses. By reducing reliance on less sustainable energy sources, this project will contribute to a cleaner and more sustainable energy future for Mauritania.

This project is strategically important for Mauritania, as it will not only address current energy deficits but also attract further investment in key sectors such as manufacturing, agriculture, and tourism. By improving energy access and reliability, the project will create a more conducive environment for economic growth and development.

Madkour Group, with its extensive experience in engineering, procurement, and construction across Africa and the Middle East, is well-positioned to execute this project successfully. The company brings a strong track record of delivering high-quality infrastructure projects that contribute to sustainable development across the continent.

This project underscores Madkour Group's commitment to driving positive change in Africa. By investing in critical infrastructure and promoting sustainable energy solutions, the company is playing a vital role in shaping a brighter future for the region.
