

# Trump Administration Courts Asian Allies with US LNG Push, Focusing on Alaska Project

February 24, 2025

**The Trump administration is actively promoting US liquefied natural gas (LNG) exports to Asian allies, framing it as a strategic move to enhance energy security, address trade imbalances, and counter the influence of China and Russia. A key element of this strategy is the revival of the decades-old Alaska LNG project, a \$44 billion venture to tap Alaskan gas reserves and ship them to Asia.**

During a recent meeting between the US and Japanese leadership, the Alaska LNG project was a prominent topic of discussion. US officials emphasized the project's potential to replace Middle Eastern energy shipments, reduce Japan's trade deficit with the US, and offer a more secure supply route compared to routes through vulnerable chokepoints.

While Japan expressed cautious optimism about participating in the Alaska LNG project, the feasibility of the project faces significant cost and logistical challenges. Despite these hurdles, the broader push for increased US LNG imports is gaining traction with several Asian nations, including Japan, South Korea, and Taiwan.

The administration's sales pitch focuses on the strategic advantages of US LNG, highlighting its cleaner production compared to some competitors and its role in diversifying energy sources. The strategy also seeks to capitalize on concerns about trade tariffs and the security of sea lanes that carry energy imports.

Japan's involvement is considered crucial due to its status as the world's second-largest LNG importer and its potential to act as a regional distribution hub for US gas. The administration envisions a scenario where US LNG flows to Japan and South Korea, and then is distributed throughout Southeast Asia, creating economic dependence on the US.

While the Alaska LNG project remains uncertain, the broader strategy to increase US LNG exports to Asia is actively being pursued. This initiative reflects the administration's broader efforts to reshape economic relations with East Asia by linking regional allies to the US through increased investment in American fossil fuels.
