

UAE and France Announce Partnership to Build Europe's Largest AI Data Center

February 8, 2025

In a significant move towards global AI leadership, the United Arab Emirates and France have announced a strategic partnership to develop a 1-gigawatt AI data center in France. This ambitious project, involving substantial Emirati investment, aims to position Europe at the forefront of artificial intelligence development.

The agreement, signed during a state visit by UAE President Sheikh Mohamed bin Zayed Al Nahyan to France, outlines a framework for collaboration on AI projects and investments. This partnership reflects the growing global competition in AI and underscores the importance of international cooperation in advancing this critical technology.

The 1-gigawatt AI data center will be a cornerstone of this partnership, providing the necessary infrastructure to support the rapid growth of AI research, development, and deployment. This state-of-the-art facility will be one of the largest AI data centers in the world, significantly enhancing Europe's AI capabilities.

This announcement comes as global leaders gather in Paris to discuss the opportunities and challenges presented by artificial intelligence. The development of this cutting-edge AI infrastructure highlights the commitment of both France and the UAE to advancing AI research and development while ensuring responsible and ethical AI development.
