

Copenhagen Infrastructure Partners Secures Over €12 Billion for Global Greenfield Renewable Energy Expansion

March 18, 2025

Copenhagen Infrastructure Partners (CIP), a leading global energy infrastructure investment firm, has announced the successful closing of its CI V fund, amassing over €12 billion (US\$13 billion) in capital commitments. This significant financial milestone underscores CIP's continued leadership in driving the global transition to renewable energy and its commitment to developing large-scale, greenfield projects.

The CI V fund, building upon the success of its four predecessor funds, will focus on investing in a diversified portfolio of renewable energy generation and storage assets across strategically selected low-risk OECD countries. These key regions include Europe, North America, and the rapidly growing Asia-Pacific market, reflecting CIP's global vision and commitment to fostering sustainable energy solutions worldwide.

With the newly secured capital, CIP anticipates the CI V fund will contribute up to 30GW of new renewable energy capacity to global energy grids. This substantial addition will play a critical role in accelerating the decarbonization of energy systems and meeting the increasing demand for clean, reliable power. The fund's focus on greenfield projects, which involve the development of new infrastructure from the ground up, allows CIP to leverage its deep expertise in project development, construction, and operation, ensuring the delivery of high-quality, long-term sustainable assets.

CIP's strategic investment approach targets a broad spectrum of renewable energy technologies, including offshore and onshore wind, solar photovoltaic, biomass, transmission, and energy storage. This diversified

strategy mitigates risk and ensures the fund can capitalize on the most promising opportunities across the renewable energy landscape. Furthermore, the CI V fund will prioritize projects that demonstrate strong environmental, social, and governance (ESG) performance, aligning with CIP's commitment to responsible investing and sustainable development.

According to CIP, the CI V fund has already made six final investment decisions, committing 60% of its funds. This rapid deployment of capital reflects CIP's established track record and its ability to identify and execute high-value projects in a timely manner. The firm's integrated approach, combining deep industry knowledge with robust financial structuring, has enabled it to consistently deliver strong returns for its investors while contributing to the global energy transition.

The successful closing of the CI V fund reinforces CIP's position as a leading force in the global renewable energy market. The firm's commitment to developing large-scale, greenfield projects in key regions will play a crucial role in accelerating the transition to a sustainable energy future and meeting the growing demand for clean, reliable power. By leveraging its expertise and financial resources, CIP is poised to make a significant impact on the global energy landscape, driving innovation and fostering a more sustainable future for generations to come.
