

Exail Technologies Secures Ukraine Fund Support for €15 Million Demining Project

March 12, 2025

Exail Technologies has been selected as a winner in the Ukraine Fund's call for projects, securing €15 million to deploy a comprehensive demining solution. The project, aimed at bolstering Ukraine's economic resilience, will leverage Exail's expertise in autonomous robotics, featuring both underwater and land drones, coupled with comprehensive training for Ukrainian personnel.

This initiative, presented in partnership with Géomines, a French specialist in land and underwater demining, was chosen from over 70 applications, highlighting the project's strategic importance. The project will run until 2026.

The Ukraine Fund, a €200 million initiative by the French government, seeks to support the reconstruction and restoration of critical infrastructure in Ukraine. Exail's demining solution directly addresses one of Ukraine's most pressing needs, contributing to the country's safe and efficient recovery.

Exail Technologies, a leader in high-technology autonomous robotics, will provide its advanced drone systems and training programs to facilitate the safe and efficient clearance of mines. The company's vertically integrated operations, spanning drones, navigation, aerospace, and photonics, enable it to deliver robust and reliable solutions for challenging environments.

This project further solidifies Exail Technologies' commitment to providing cutting-edge solutions to its global clientele, operating in nearly 80 countries.

Exail Technologies is listed on Euronext Paris Compartment B (EXA) and is a member of the Euronext Tech Leaders segment, recognizing its position as a leading technology innovator. Sources and related content
