

Subsea7 Secures Strategically Important West African Contract

May 22, 2025

Subsea7, a global leader in the delivery of offshore projects and services, today announced it has been awarded a “sizeable” subsea contract in West Africa, with a value ranging between \$50 million and \$150 million. This significant award underscores Subsea7’s continued momentum in key energy regions.

Under the terms of the contract, Subsea7 will be responsible for the transportation and installation of flexible pipelines, umbilicals, and associated subsea components required for the connection of a floating production, storage and offloading (FPSO) vessel. The scope also includes pre-laying activities in preparation for an upcoming drilling campaign.

Project management and engineering work for this strategically important project will commence immediately at the company’s offices in Sutton, UK, and Suresnes, France. Offshore operations are slated to begin in 2026.

Jerome Perrin, Subsea7’s Vice President for Africa, Middle East, and Türkiye, commented, “Our close and agile collaboration with our clients enables us to provide cost-effective and reliable offshore solutions tailored to their needs. We are pleased to support this client in executing such a strategically important project in West Africa.”

This latest award follows a series of recent contract successes for Subsea7. Earlier this week, the company announced a Front-End Engineering and Design (FEED) study contract with U.S. energy giant ConocoPhillips for the Previously Produced Fields (PPF) development project in Norwegian waters. Furthermore, earlier this month, Subsea7 secured a “super-major” contract, valued at over \$1.25 billion, with Brazilian oil and gas giant Petrobras for a field located at 2,000 meters water depth off the coast of Rio de Janeiro. These consecutive wins highlight Subsea7’s strong position in the global offshore energy market.
