# Anthropic Releases Claude 4 with Enhanced Coding Capabilities

June 9, 2025

Anthropic has launched Claude 4, introducing two new models—Claude Opus 4 and Sonnet 4—that showcase impressive coding capabilities and enhanced reasoning abilities. Sonnet 4 is available for free users and will be integrated into GitHub Copilot, making advanced AI assistance accessible to more developers. Learn more about Claude 4.

What Does This Mean for Me?

For project delivery professionals, Claude 4's improved coding and reasoning capabilities offer new opportunities to automate complex tasks and enhance decision-making processes. The integration with GitHub Copilot means that even team members with limited coding experience can leverage AI assistance for technical tasks. However, it's worth noting the controversy surrounding Claude 4 Opus's safety features, which include the ability to contact authorities if it detects potentially harmful activities.

Key Themes or Details

- Enhanced Coding Capabilities: Both Claude Opus 4 and Sonnet 4 score exceptionally high on coding benchmarks, making them valuable tools for automating development tasks.
- Improved Reasoning: The new models demonstrate advanced reasoning abilities, potentially helping project teams solve complex problems more efficiently.
- AI Safety Level 3: Anthropic has implemented new safety measures, though these have sparked debate about the appropriate boundaries for AI intervention.

- New Pricing Structure: Anthropic has introduced updated pricing for Claude 4, with different tiers based on usage and capabilities.
