

Brookfield Renewable Achieves Record-Breaking Performance in Q2 2025 with Over \$400 Million in FFO

August 5, 2025

Brookfield Renewable, a prominent independent power producer (IPP), has announced a new financial milestone, reporting a record-breaking quarter for its renewable generation portfolio. According to its latest financial results, the company's renewable assets generated over \$400 million in funds from operations (FFO) during the second quarter of 2025. This achievement marks the second consecutive quarter that the company's wind, solar, storage, and hydropower assets have exceeded this benchmark, underscoring the strong performance and growing scale of its clean energy portfolio.

The stellar performance of the generation assets was a highlight of the quarter. While corporate-level expenses led to a net FFO of \$371 million, the underlying strength of the company's operational portfolio was clear. CEO Connor Teskey emphasized the positive momentum, stating, "This was another strong quarter for Brookfield Renewable. Our core renewable generation assets continue to deliver exceptional results, demonstrating the value of our diversified portfolio and our strategic focus on expanding our clean energy footprint."

This record-setting performance is attributed to a combination of factors, including the continued expansion of Brookfield Renewable's global asset base and favorable market conditions. The company's strategic investments in a wide range of renewable technologies have created a robust and resilient portfolio capable of generating significant returns. The consistent delivery of over \$400 million in FFO from generation assets for two consecutive quarters highlights the company's operational excellence and its ability to capitalize on the growing demand for sustainable energy solutions.

As the energy transition accelerates, Brookfield Renewable is well-positioned to continue its growth trajectory. The company's focus on a diverse mix of wind, solar, hydroelectric, and energy storage projects not only mitigates risk but also allows it to provide reliable power across different markets. This strong financial performance provides a solid foundation for future investments and further solidifies its leadership position in the renewable energy sector.
