

Infotech Acquires Workflow Manager to Deliver First End-to-End Project Lifecycle Management Platform for Civil Construction

October 31, 2025

Infotech, a leading provider of infrastructure construction software solutions, has announced the acquisition of Workflow Manager, a planning and project delivery application designed for transportation agencies and their consultants.

The acquisition marks a major milestone for Infotech, enabling the company to offer the civil construction industry's first platform for **end-to-end project lifecycle management**, seamlessly connecting the planning, estimating, bidding, and building phases of infrastructure projects.

"Workflow Manager is a robust tool for the critical planning and pre-construction stages of infrastructure projects managed by Departments of Transportation, Municipal Planning Organizations (MPOs), local public agencies, and architecture, engineering and construction firms," said Shelly Nooner, Chief Product Officer at Infotech. "By integrating Workflow Manager with our Appia® construction administration platform, we are now able to connect every stage of the project lifecycle, eliminating the need for civil infrastructure professionals to manage separate systems for tracking planning, construction management and project delivery."

Workflow Manager supports transportation improvement program planning processes by offering software tools that help users plan, track and manage capital improvement projects more efficiently. Its integration into Infotech's portfolio strengthens the company's position as a leader in cloud-based construction management solutions and introduces several key benefits for customers:

- **Unified Project Management:** Integration with Infotech's Appia® platform will allow agencies to manage planning and construction within one environment, maintaining data continuity and simplifying reporting.
- **Enhanced Financial Visibility:** The combined platform delivers real-time insights into spending, helping mitigate delays and cost overruns.
- **Seamless Data Handoff:** Key planning data such as bid design packages, budgets and requirements can be transferred directly into the construction phase for improved efficiency.
- **Improved Estimating and Feedback Loops:** Integration with Infotech's cost data enables more accurate estimates during capital planning.
- **Automated Bid Process:** Workflow Manager will automatically transfer bid packages to Infotech's Bid Express® platform, streamlining project execution.
- **Added Value for Bid Express® Users:** The integration gives users greater visibility into planned projects, supporting better forecasting and resource planning.

"We are thrilled to integrate Workflow Manager into our suite of comprehensive construction solutions," said Ms. Noonan. "This acquisition is a testament to our dedication to innovation and our relentless pursuit of solutions that empower our customers across the entire infrastructure industry. Workflow Manager's advanced pre-construction capabilities complement and expand our existing offerings, allowing us to provide a more comprehensive and integrated platform that drives efficiency, transparency and greater success for our user community."

Ms. Noonan added that the acquisition also ensures state and local agencies will have the data integrity and accuracy needed for successful implementation of emerging technologies such as AI and GIS.

About Infotech

Info Tech Operating, LLC (DBA Infotech) is a leading SaaS solutions provider for the infrastructure construction industry. Backed by decades of experience and strong relationships with Departments of Transportation, Infotech develops software that bridges the gaps between owners, consultants, contractors, and other stakeholders. Its solutions — including Appia®, Bid Express®, Signet®, and Doc Express® — are built to improve transparency, productivity, and data accessibility. Infotech is also the official contractor for AASHTOWare Project™.
